

NUCLEAR POWER PLANT ENGINEERING

Electrical engineering grounded in nuclear safety and reliability.

Lifecycle support for nuclear generation—from system studies and design modifications to equipment upgrades, compliance documentation, and long-term plant reliability.

Defensible engineering for safety-critical power systems.

Keentel Engineering supports nuclear owners and project teams with disciplined electrical analysis, coordinated design, and traceable technical documentation. Our work connects plant requirements, regulatory expectations, constructability, and operational continuity.

Lifecycle

DESIGN THROUGH LONG-TERM
OPERATION

Safety-first

ENGINEERING DECISIONS
AND DOCUMENTATION

Plant-ready

COORDINATED TECHNICAL
DELIVERABLES

Independent

OWNER-FOCUSED
ENGINEERING SUPPORT

Electrical support across the plant lifecycle.

Off-Site Power Systems

Transmission interface, switchyard, grid connection, preferred power supply, and system performance studies supporting dependable off-site sources.

On-Site Power Systems

Class 1E and non-Class 1E distribution, emergency power, auxiliary systems, load flow, short-circuit, coordination, and voltage studies.

Protection & Short Circuit

Detailed fault-duty evaluation, protective-device coordination, settings development, selectivity assessment, and engineering documentation.

Cable & Raceway Design

Cable sizing, ampacity, voltage drop, separation, routing, raceway fill, fire-protection interface, and installation-ready design support.

Equipment Upgrades

Obsolescence management, replacement evaluations, design modifications, vendor-document review, and implementation support.

Maintenance & Diagnostics

Electrical condition assessment, performance review, troubleshooting, reliability improvement, and corrective-action engineering.

Regulatory & Licensing Support

Traceable calculations, design-basis documentation, licensing-change support, audit-ready evidence, and technical response development.

Field & Commissioning Support

Testing coordination, issue resolution, installation review, turnover documentation, and engineering support through energization.

Discuss your plant or upgrade program.

Engage Keentel early to align scope, technical assumptions, regulatory requirements, and delivery milestones.
